Two of the more popular and effective flushes are Thermocure Coolant System Rust Remover and Super Radiator Flush. The process is fairly universal, but some things can vary so, again, be sure to read the directions. The basic process is to put in the flush, turn on the engine to circulate the fluid, let the car cool, and then drain the flush.

How to Flush a Radiator: The Complete Guide - Autowise

10-15 minutes is a good time for an engine flush to dissolve the deposited waste. Once the waste is dissolved in the oil, the old oil is drained out of the engine causing a clean engine. The engine is poured in with fresh oil and all the gunk is drained. The performance of the engine gets amazing with this process.
