Difference Between 3D and 4D The world we experience is composed of three-dimensional space – width, depth, and height, in addition to the temporal dimension of time. But scientists have long assumed that there probably is a fourth spatial dimension that is beyond what we can experience or understand. Evidence of the existence of the fourth dimension (4D) is problematic [...]

Topology is the mathematical study of the properties that are preserved through deformations, twistings, and stretchings of objects. Tearing, however, is not allowed. A circle is topologically equivalent to an ellipse (into which it can be deformed by stretching) and a sphere is equivalent to an ellipsoid. Similarly, the set of all possible positions of the hour hand of a clock is ...
