Linux is the cp or copy command. The most basic way to use this command is to copy a file or multiple files. The cp command is one of the first commands you should learn as a newcomer to Linux, as copying files and directories is something you'll do often.

Understanding how the command does this is easier than you think.

The `df` command is the tool I first used to discover drive space on Linux, way back in the 1990s. It's very simple in both usage and reporting. To this day, `df` is my go-to command for this task. This command has a few switches but, for basic reporting, you really only need one. That command is `df -H`. The `-H` switch is for human-readable format.
