Tire manufacturers measure static balance by the use of a sensor mounted to the spindle assembly, and measure dynamic balance by mounting a tire on a test wheel, accelerating the assembly to 300 rpm or higher and then measuring the forces of imbalance as the tire rotates. In most cases, the old-school bubble balancer is a thing of the past.

Tire Wheel Balancing Steps - Tire Review Magazine

Place the rim on the tire machine. The tire machine is designed to accept the rim facing up. Set it on the machine and engage the hydraulic press that secures the rim in place from beneath by pressing the pedal associated with it. Most tire machines have two pedals: one to engage the press and another to rotate the rim.
