Metacognition In Science Education Trends

L. Baker, in International Encyclopedia of Education (Third Edition), 2010

Metacognition is the awareness and control of one's own cognition. The construct of metacognition has been useful to researchers and educators seeking an explanation for why some students fare better in school than others.

A pesticide is any substance or mixture

of substances intended for preventing, destroying, repelling, or mitigating any pest (epa.gov). Pests can be defined as any organism that causes plant diseases. Agricultural pesticides are then those chemicals that are used by farmers to prevent the effectivity of the pests on the growth and productivity of agricultural crops.
