Serial dilutions of mAbs or serum were incubated with 10<sup>2</sup> focus-forming units of different strains or variants of SARS-CoV-2 for 1 h at 37 °C. Antibody-virus complexes were added to Vero-hACE2 ...

#### Genetic and structural basis for SARS-CoV-2 variant ...

Introduction. Considerable progress has been made in understanding the mechanisms of the antibacterial action of antiseptics and disinfectants (215, 428, 437). By contrast, studies on their modes of action against fungi (426, 436), viruses (298, 307), and protozoa have been rather sparse. Furthermore, little is known about the means whereby these agents inactivate prions ( ).

TEM. The TEM-type ESBLs are derivatives of TEM-1 and TEM-2. TEM-1 was first reported in 1965 from an Escherichia coli isolate from a patient in Athens, Greece, named Temoneira (hence the designation TEM) ( ). TEM-1 is able to hydrolyze ampicillin at a greater rate than carbenicillin, oxacillin, or cephalothin, and has negligible activity against extended-spectrum cephalosporins.

Bacterial Vaginosis Bacterial vaginosis (BV) is a condition in which the natural balance of organisms found in the vagina is changed from a predominance of Lactobacillus to an over-growth of other bacteria including Gardnerella vaginalis, Mobiluncus and other anaerobes. Atopobium vaginae is a recently recognized bacterium that has been found in bacterial vaginosis (Ferris et al, 2004).
