Neuropsychology
understand how cancer, collateral clinical factors, and treatments together cause cognitive deficits. For example, an important hypothesis recurs among chapters on different cancers about the risk of cognitive injury from platinum-based chemotherapy, with apparent reversal of injury symptoms when treatment ends.

Neuropsychological Practice in the Oncology Setting

Oncology researchers and clinicians are increasingly cognizant of the negative effects of cancer and its treatments on the brain and its mental processes and cognitive outcomes. Nevertheless, effective interventions to treat cancer and treatment-related neurocognitive dysfunction (CRND), also known as chemobrain, are still lacking.

Neuropsychological Care and Rehabilitation of Cancer ...

Neuropsychology is a sub-specialty of clinical psychology that focuses on brain injuries and disease. For cancer patients, brain damage happens when there's a brain tumor or when there's neurotoxicity from treatments associated with cancer of any kind. Chemotherapy and radiation are primary

Neuropsychology | Children's National Hospital

Oncology is the study of cancer. An oncologist is a doctor who treats cancer and provides medical care for a person diagnosed with cancer. The field of oncology has three major areas: medical, surgical, and radiation. A medical oncologist treats cancer using chemotherapy or other medications, such as targeted therapy or immunotherapy.
