If your cube already has the cross, skip this part. Hold the cube so that one of the edges that needs to be flipped is facing you. Then apply this algorithm: F R' D' R F2. This algorithm will flip the edge so the white part is facing upwards. Do this for every edge until you have a white cross on top.

The cube is solved Hold the cube in your hand with an unsolved corner on the front-right-top corner, then do the algorithm below twice or four times until that specific piece is oriented well: R' D' R D It will look like you've messed up the whole cube but don't worry, it will be all right when all the corner pieces are oriented.

How to solve the Rubik's Cube - Beginners Method

This is where speedcubes outperform the Rubik's brand cubes because most of the modern cubes allow for 45 degrees corner cutting, meaning that cubes can realign when the top face is turned over 45 degrees forward. This provides room for error and increases fluidity. Okay, now you know what corner cutting is but Is every corner cutting good?
