There are more security settings at the Windows level and this is approach is seen as a best practice for SQL Server.-Greg. ... Is that not an issue when using the Windows groups solution, since SQL Server only sees the one login/user associated with the group? It certainly seems to lead to cleaner management of privlages and access.

Using Windows Groups for SQL Server Logins as a Best Practice

The common practice is to pass all necessary parameters to the stored procedure through a T-SQL, or CmdExec script. These scripts can then be included in a SQL Server Agent job, and assigned to run on a custom schedule. Creating and configuring these jobs would result in a custom, fully automated index maintenance solution.
