MSE Criterion. Sometimes, a statistical model or estimator must be "tweaked" to get the best possible model or estimator. The MSE criterion is a tradeoff between (squared) bias and variance and is defined as: "T is a minimum [MSE] estimator of  $\theta$  if  $MSE(T, \theta) \leq MSE(T', \theta)$ , where T' is any alternative estimator of  $\theta$  (Panik)."

Statistics, when used in a misleading fashion, can trick the casual observer into believing something other than what the data shows. That is, a misuse of statistics occurs when a statistical argument asserts a falsehood. In some cases, the misuse may be accidental. In others, it is purposeful and for the gain of the perpetrator. When the statistical reason involved is false or misapplied, this ...
