Definition, Method, Types ...

A zero of a quadratic (or polynomial) is an x-coordinate at which the y-coordinate is equal to 0. We find that algebraically by factoring quadratics into the form $(x - a)(x - b)$, and then setting equal to 0 and $x = a$ or $x = b$, because in each of those cases and entire parenthetical term would equal 0, and anything times 0 equals 0.
